Fiber Optic 3G-SDI Extension Module

Description

OPTICIS miniature 3G-SDI extender is an optimized and high-end level solution designed for transmission of multi-rate 3G-SDI, HD-SDI, DVB-ASI digital video data over both single-mode, multi-mode 1 fiber-optic cable. Supporting the new 1080p, 3G-SDI format, it converts and transport one(1) channel SMPTE 424M, 3G-SDI, SMPTE-292M HD or SMPTE-295M serial digital video signal perfectly over long distance right after its transmitter receive the input signal. It also adopts ST terminated fiber-optic connector and HD-SDI BNC input connector for suitable application and both modules guarantee the signal quality by equalizing and re-clocking features.

Due to the use of advanced digital fiber optic transmission technology, no user adjustments are required in the Mini 3G-SDI extender system, enabling quick setup and trouble-free operation and because of latch-locking mechanism for power connector, no power disruption due to miss-handling problem. It comes with a rugged, standalone, miniature and metal die-casting enclosure type for harsh applications including broadcasting, medical, military and more for your world.

The modules are consisted of three(3) parts as follows;

- One transmitter converting digital video signal to optical signals, model name: SDIX-100-T
- One receiver converting optical signals to digital video signals, model name: SDIX-100-R
